- Advance Query Editor

**Power BI Desktop (Free):**

- Power BI Desktop is simply the Power BI version that you install on your local system / computer to access Power BI's basic functionality and function as a companion to the main cloud-based program.
- For anyone and anyone who wants to derive useful insight from their data and apply it to their business, Power BI is **free**. Ideal for small business owners and independent professionals who do not necessarily need large-scale coordination and integration.

**Power BI Pro (\$9.99/user/ month):**

- Power BI Pro is the full version of Power BI, meaning it comes complete with the ability to use Power BI for both dashboard creating, reporting and unrestricted viewing, sharing and consumption of your generated reports (and other shared reports) that is not possible with Power BI Desktop.
- Power BI Pro vs. Free is mainly approved by the individual users. This means that each person will obtain their winning Power BI Pro license and the collective use of which will allow each member of the company to combine their workplace and hence their efforts.
- The cost of the Pro plan is \$9.99/user/ month. It involves data sharing, data governance, creating dashboards with a real-time view of 360 degrees, and being able to publish reports anywhere. Users will give out a free 60-day trial before purchasing the subscription.

**Power BI Premium (plan starts at \$4,995):**

- The Power BI Premium license is not a Free or Pro license per user. Instead, the Power BI Premium license provides all consumers in the enterprise with a dedicated capability machine. This dedicated room (aka Premium Workspace) can be used to host massive datasets of up to 50 GB while providing 100 TB of total cloud storage.
- Power BI Premium is intended for use in large organizations with a large number of users requiring real-time collaboration. The technology is geared towards addressing the problems of implementations and workloads of major enterprises.
- The Premium plan starts at \$4,995 per dedicated cloud computing and storage resource per month. This does not include the licensing costs that are needed for individual Pro and Free licenses for each user in your organization.
